

SUSTAINABILITY

Commercial property can contribute considerably to enabling a more sustainable built environment, from creating more energy efficient low-carbon assets to enabling social value through collaboration and engagement with supply chains and the localities in which assets are located.

Jones Hargreaves offer our clients the ability to create bespoke sustainable design strategies for refurbishment or new build projects, complete with detailed optioneering analysis at the earliest stages so that sustainability is at the core of design from the outset.

We are able to utilise the skills of our building surveyors to examine the constraints and merits of solutions and options, along with modelling outcomes to provide Design teams with the information required to collaborate and innovate to achieve the most sustainable and commercially viable outcomes.

Where required, we work with selected and trusted third parties to deliver independent certification.

Our services include:

- Sustainable design strategies and optioneering
- BREEAM In-use (BIU) and Retrofit (RFO) certification.
- NABERS (UK) certification
- Fitwell certification
- SKA certification
- Project Monitoring Services
