

# ENERGY PERFORMANCE CERTIFICATES

80% of today's building stock will still be in existence by 2050, meaning retrofitting every one of those assets to be energy efficient must either be complete or, at the very least, well underway by 2030 to be able to meet regulatory targets.

Energy Performance Certificates (EPCs) remain an important regulatory driver for investing in energy efficiency and low carbon retrofit solutions.

Current plans by the UK Government are heading towards a requirement to achieve an EPC Band B by 2030 for all commercial real estate assets.

Our qualified non-domestic energy assessors work with the latest modelling software, hand in hand with our chartered surveyors and chartered building services engineers to provide clients with commercially tailored strategies for meeting their own, or statutorily imposed, EPC requirements across individual assets and portfolios.

Our EPC services include:

- Non-domestic accredited (NDEA) EPC Assessments
- Level 3, 4 and 5 EPCs
- New build EPCs
- EPC Improvement Strategy and Cost Plans
- DesignBuilder: advanced modelling software
